

Build apps for any platform in pure Python

Single Code Base for Any Device

Your app will look equally great on iOS, Android, Windows, Linux, macOS and web.

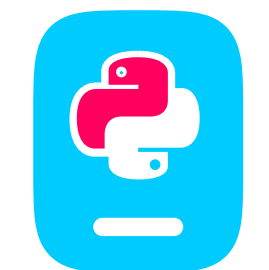

Build an entire app in Python

Build cross-platform app without knowledge of Dart, Swift, Kotlin, HTML or JavaScript - only Python!

140+ built-in controls

Beautiful UI widgets with Material and Cupertino design: layout, navigation, dialogs, charts - Flet uses Flutter to render UI.

50+ Python packages for iOS and Android

Numpy, pandas, pydantic, cryptography, opencv, pillow and other popular libraries.

Full Web Support

Flet apps run natively in modern browsers using WebAssembly and Pyodide, with no server required. Prefer server-side? Deploy as a Python web app with real-time UI updates.

An open-source application framework for Python to build responsive cross-platform applications from a **single codebase**.

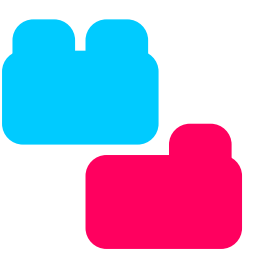

Built-in packaging

Build standalone executables or bundles for iOS, Android, Windows, Linux, macOS and web. Instantly deploy to App Store and Google Play.

Test on iOS and Android

Test your project on your own mobile device with Flet App. See your app updates as you make changes.

Extensible

Easily wrap any of thousands of Flutter packages to use with Flet or built new controls in pure Python using built-in UI primitives.

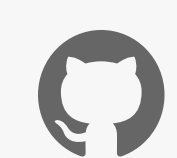

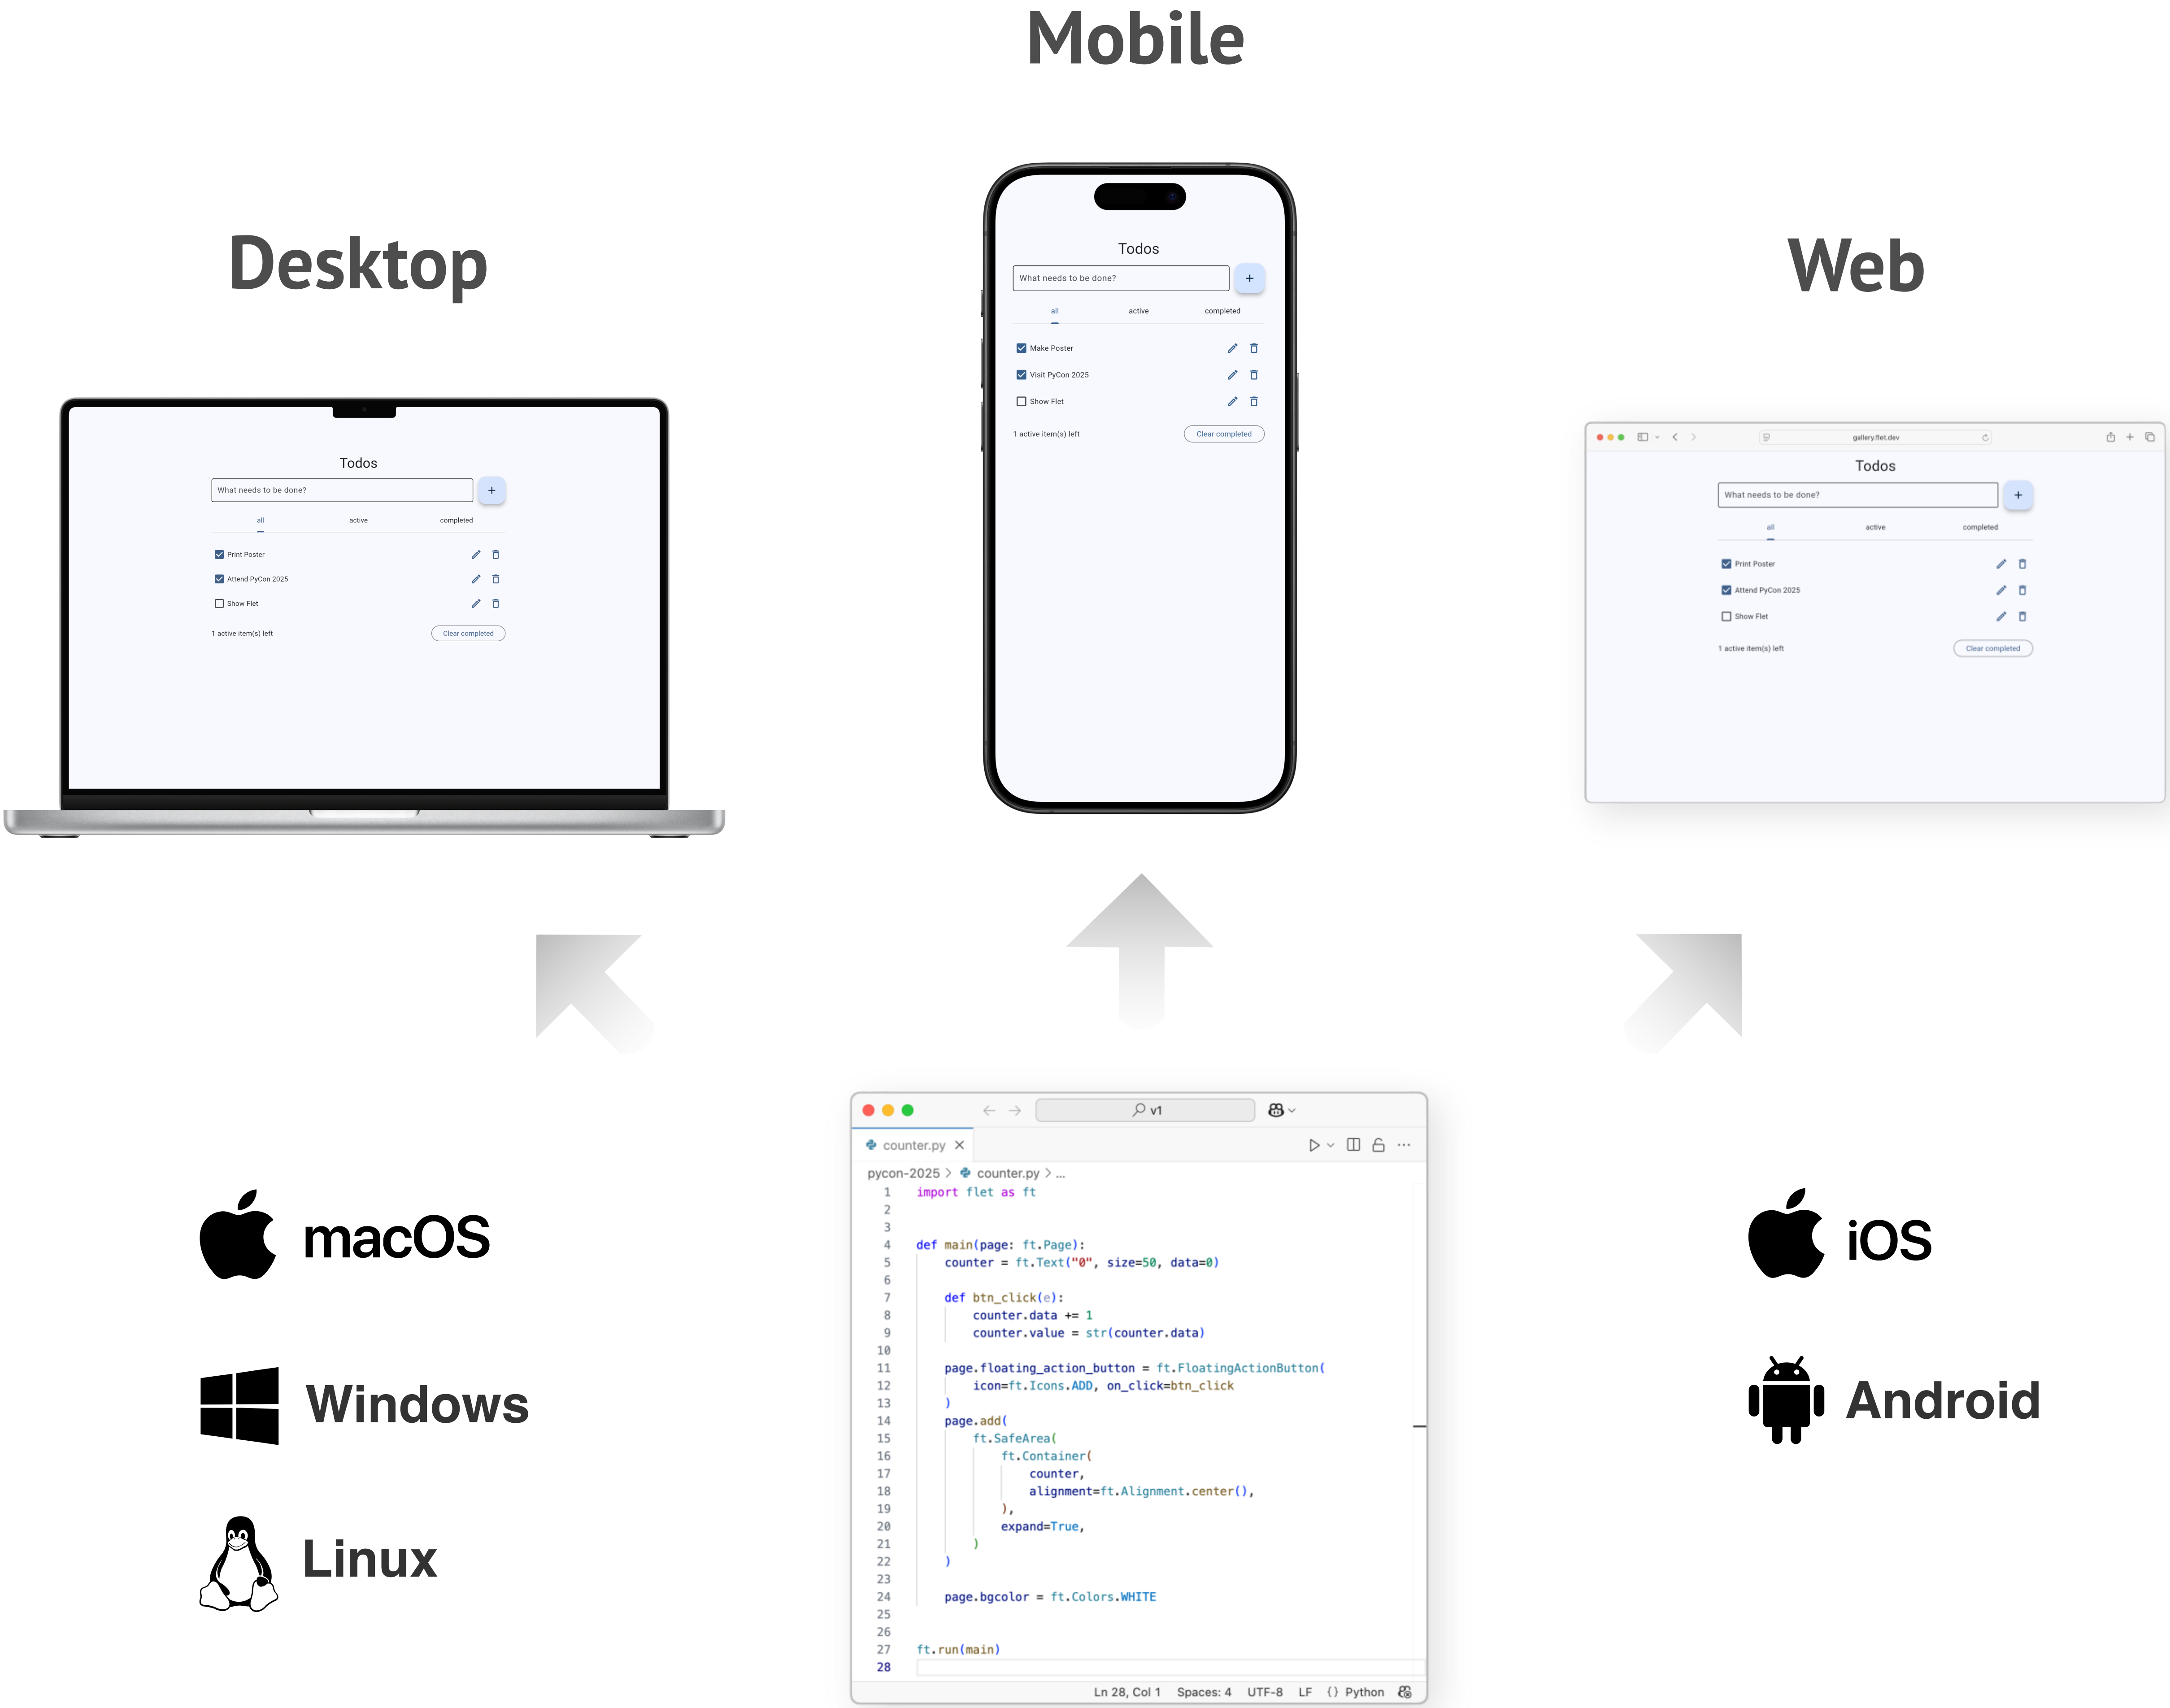

Accessible

Flet is built with Flutter which has solid accessibility foundations on Android, iOS, web, and desktop.

Build apps your way

Flet supports both imperative and declarative approaches to writing apps.
